Marvel® Debuts Two Undercounter Refrigerators with MicroSentry™

New 15- and 24-inch refrigerators include digital monitoring technology to ensure optimal storage conditions

Richmond, IN - Marvel Industries, the leading manufacturer of luxury undercounter refrigeration products, today announces two new stylish undercounter refrigerators with **MicroSentry™**, a new, temperature monitoring system with digital touchpad control and LED readout.

“MicroSentry temperature monitoring is next-generation technology that can be found only on Marvel® products,” said Gerry Reda, senior vice president of sales for Marvel. “The MicroSentry monitor takes the worry out of food preservation. When you’re busy cooking a meal for family or friends, the last thing you want to think about is whether the food inside is at the correct temperature when opening and closing refrigerator doors. With MicroSentry monitoring, you can be confident your food is always being stored properly.”

A bold, amber LED displays the temperature in real time

While most refrigeration displays show only the user’s dialed-in temperature, the new MicroSentry-enabled refrigerators display the actual real-time temperature of the refrigerator contents.

Utilizing digital control technology, the new refrigerators adjust to meet the user setting, calculate the difference between the setting and actual temperature, and adjust cooling accordingly.

- This new level of digital control is integral to ensuring quality food storage and flavor in kitchens where units are in continual use and opened frequently.
- Marvel’s undercounter refrigerators have one of the most powerful compressors in the industry, delivering rapid cool-down of contents even under heavy use.

New models extend undercounter refrigerator line

Offering three and six cubic feet of storage respectively, each unit packs a lot of quality refrigeration into a small space.

- The 15-inch model features three fully adjustable interior shelves; the 24-inch model offers an open design with two tempered glass shelves, allowing for the storage of large items, including 18-inch deli trays and party platters.
- Both undercounter refrigerators with MicroSentry are available with three door shelves that neatly hold smaller items, plus a full-wrap door with a recessed gasket. Both models can be ordered with a full overlay, white, black or stainless steel door.
- Overlay panels are the easiest in the market to install, with no kit required.
