MARVEL OFFERS ENERGY CONSCIOUS ENTERTAINING WITH A FULL-WRAP GLASS DOOR

RICHMOND, Ind.—For homeowners who are as serious about function as they are design, Marvel proudly introduces a new energy efficient, seamless glass door for its line of wine cellars and wine and beverage refrigerators.

The new door is framed in one continuous piece of either powder-coated steel or 304-grade stainless steel that is designed to eliminate unsightly miter joints and sharp corner edges, thus providing an integrated, seamless application for a clean, modern look. The door also features an insulation system around the outer perimeter of the dual-panel glass and a low-emittance coating that stops the flow of heat outside the glass door from entering the cool interior of the cabinet.

“When we set out to make a more refined glass door reflective of the best in style, we paid attention to the little details that make a big difference in energy conservation,” said Erskine Ratchford, director of engineering. “The new features are designed to not only give a beautiful appearance, but to minimize the demands of the refrigeration system in maintaining consistent temperatures. ”

Available in black, white and 304-grade stainless steel, all options feature Marvel’s monochromatic styling with coordinating hinges and a sleek, matching full length bar handle.

About Marvel

Marvel is the leading manufacturer of luxury undercounter refrigeration products, including wine cellars, beverage and wine refrigerators, refrigerated drawers, ice machines, beer dispensers and outdoor refrigerators. The seamless full-wrap glass door design is available through a national network of retailers served by local distributors. For complete information regarding the new glass door or to locate a Marvel distributor near you, visit www.lifeluxurymarvel.com or contact Marvel Industries, an Aga Group Company, at (800) 428-6644.
